Export form data, not the entire form If you have an interactive form that many people use, you want to collect information so that you can use it. Or maybe you need to make a reverse, a.k.a. fill out an interactive form with data from your database. In both of these cases, the following are PDF files: importing and exporting data to PDFs. PDF files are smaller than PDF files because they contain only form field data, not the entire form. Importing and exporting form data is for PDF interactive forms only, not static forms. To export the form data, follow these steps: Select Forms > Form Data > Export > To File. In the Save As dialog box, specify the save path, name the file you want to export, and then select the file format that you want, type Save As to save the file.
